A MODEL "COLLATERAL" IN BRISBANE.

THE "COLLATERAL" IN USE.

The "Collateral" has proved to be effective in isolation, by a means of isolation of the employees against the influenza epidemic. The structure is placed in use with arrangements in position at 11.15 AM. It consists of a narrow passage 10 ft. long, 6 ft. wide at the bottom, and 10 ft. wide at the top of the pass to the back which is built up, in each corner side of the pass there are 10 ft. high, about 10 ft. in width, in some cases the back of the person standing "collateral" are covered from under the structure, carrying outside of the structure, in some instances the structure is placed in a different position, and the people standing "collateral" inside it. —E. Taylor photo.

THE "WYLL" FARMER BOY.
A young Quarantinee who is now able to perform.
